

VACUUM TRAILERS

Why choose for Votex?

With the Votex suction wagon range, we offer some of the most versatile and powerful suction machines on the market. These machines are designed for year-round use and are suitable for a wide variety of applications.

By simply changing the working shaft, the suction wagon can quickly be adapted for different tasks such as mowing, verticutting, sweeping and collecting. This flexibility makes Votex suction wagons highly efficient and multifunctional in daily operation.

The compact VT30 and VT40 suction wagons can be equipped with a hand-operated suction hose with a total length of 5 metres,

allowing debris to be easily removed from hard-to-reach areas. These models are also equipped with a high-tip system with a tipping height of 1.6 m, making unloading into containers or trailers simple and efficient.

The larger VT80 and VT120 models are developed for high-capacity professional use and are equipped as standard with a joystick-controlled suction arm (robo arm). This allows material to be collected efficiently along edges, in corners and in difficult-to-reach locations while maintaining maximum productivity.

Brand of Alamo Group The Netherlands

Tailored to your needs

Which model is right for your application?

S-Series: Hydraulic brush drive, ideal for sweeping and collecting grass or leaves.

M-Series: Mechanical drive of the suction head, prepared for additional tools such as a flail shaft or verti-cut shaft, thanks to the interchangeable working system in the suction head

S-Serie

Compact sweeper & collector specialist

The Votex S-Series has been specially developed for efficient sweeping and collection operations. Thanks to the hydraulic brush drive, these machines are fully optimised for collecting grass, leaves and light debris on sports fields, in parks and other green areas.

The simple and robust construction makes the S-Series highly user-friendly and low-maintenance. Combined with the powerful V-belt driven fan, this ensures reliable suction performance and high productivity, even during intensive daily use.

While the M-Series focuses on multifunctional mowing, verticutting and collecting, the S-Series is fully dedicated to maximum efficiency in sweeping and collection tasks. As a result, you benefit from a compact, reliable and cost-efficient solution for daily green maintenance. This makes the Votex S-Series the ideal choice for professionals looking for high capacity, ease of use and minimal downtime.

M-Series

Multifunctional vacuum sweeper

For sweeping, verticutting, or mowing and collecting in city parks, public green areas and sports fields, the Votex suction wagons offer a complete multifunctional solution for professional use.

With hopper capacities of 3 m³ (VT30M) and 4 m³ (VT40M), these models are ideal for collecting leaves, grass clippings, verticutting debris, pruning waste and litter.

For intensive use and larger working areas, the VT80 and VT120 provide maximum capacity and productivity. With hopper capacities of 8 m³ and 12 m³ respectively, these machines are designed to handle large volumes with minimal downtime. These models are equipped as standard with a Robo arm, allowing difficult-to-reach areas to be cleaned efficiently.

All models can be equipped with a brush shaft, flail shaft or verticutting shaft. Thanks to the quick and easy exchange of working shafts, the machines are highly versatile for daily maintenance and can be used multifunctionally throughout the entire year.

M-Series

Maximum capacity for large-scale work

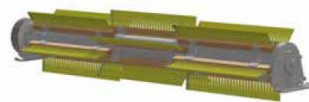

For intensive use and larger areas, the VT80 and VT120 offer maximum capacity and productivity. With hopper capacities of 8 m³ and 12 m³, these machines are designed to handle large volumes of material with minimal downtime.

They combine powerful suction performance with a robust construction for demanding conditions. Thanks to the interchangeable system, they are ideal for large-scale green maintenance, municipalities and contractors.

Optimal green maintenance with various shafts

For a healthy and strong grass surface, the Votex suction wagons can be equipped with various verticutting shafts. These effectively remove thatch and moss, improve soil aeration, and stimulate dense and healthy grass growth.

Thanks to the simultaneous verticutting and collection of the released material, the surface remains clean. This makes the machines highly suitable for sports fields, golf courses, and intensively used green areas.

Specification	VT30	VT40
Hopper capacity	3 m ³	4 m ³
Required power	35–70 hp	45–70 hp
PTO speed	540 rpm	
Tipping system	High tip (1.6 m)	High tip (±2.1 m)
Tyres	26.5x14.00-12	500/50R17
Weight (approx.)	±1.200 kg	±2.300 kg
Suction head width	1,5 meter	1,8 meter
Fan diameter (cm)	70	85
Dimensions (cm)	405*190*185	481*216*230

VT30/VT40

- » Sweeping, verticutting, or mowing and collecting in a single pass
- » Large tyres for low ground pressure
- » Adjustable air outlet
- » High working speed
- » Compact dimensions for optimum manoeuvrability
- » PTO driven
- » Optional hand-operated suction hose, 5 m Ø 200 mm (VT30 + VT40)
- » Optional Robo arm with suction hose incl. joystick control (Ø 300 mm) (VT40)
- » Designed for year-round use in various applications
- » Optional with multiple working shafts
- » Operated by one person

Specification	VT80	VT120
Hopper capacity	8 m ³	12 m ³
Required power	65-130 hp	65-130hp
PTO speed	540 rpm	
Tipping system	Hydraulic floor chain	
Tyres	500/50R17	500/50R17
Weight (approx.)	±2.800 kg	±3.500 kg
Suction head width	2,1 meter	2,1 meter
Fan diameter (cm)	96	96
Dimensions (cm)	610*230*295	730*230*295

VT80/VT120

- >> Sweeping, verticutting, or mowing and collecting in a single pass
- >> High-capacity hopper for large-scale operations
- >> Large tyres for low ground pressure
- >> Adjustable air outlet for optimal airflow control
- >> High working speed for maximum productivity
- >> Adaptable to your needs with multiple working shafts
- >> PTO driven
- >> Standard suction hose for hard-to-reach areas
- >> Hydraulic floor chain for controlled and efficient unloading
- >> Designed for year-round use in various applications
- >> Operated by one person
