

THE POWER TO PERFORM

VOTEX

VOTEX IS THE RESPONSIBLE CHOICE

Since 1922 Votex has been the leading Dutch manufacturer of machines used for the management and maintenance of public green spaces. Votex is also a household name in the European agriculture horticultural.

Votex has a long history of developing and producing the most highly-specialised machinery for use in the most diverse conditions.

Votex is leading when it comes to innovation. Votex was the first company to introduce a rotary mower back in 1956. In 1971 it launched the first Dutch flail mower onto the market. Votex is busy with innovation in other areas, too. The Votex factory uses the latest manufacturing methods, and, of course Votex wants to minimise its impact on the environment.

Votex machines are reliable. They are developed with care and constructed by enthusiastic, experienced personell who know their trade. Leaving nothing to chance, Votex uses only high-quality materials. It relies exclusively on technologies that has proven itself to work in practice, which offers an even greater degree of assurance. This translates into robust machines with a reputation for quality.

Votex makes it possible for any type of surface to be maintained using machines that have been produced sustainably.

Once you choose Votex, you will always choose Votex.

MAXIMUM PERFORMANCE IN ALL CIRCUMSTANCES

The Votex machines have been developed to ensure safe and responsible operation, whether you are actively managing verges, ditches or working in gardens and parks. You are assured of the best end result at the most favourable costs.

Professionals in over 35 countries are working with Votex: powerful machines that perform at their maximum even under the most extreme conditions.

The Power to Perform also means that every aspect is being considered in the development process: reliability, a long service life and low maintenance costs are characteristics of all Votex machines. If you want to be prepared for the future, Votex machines are your best choice.

However, even the best machines sometimes need maintenance. In that case, you can rely on servicing and supply of spare parts which are made available through Votex's dealer network.

Our dealers have the expertise to get your machine quickly back in top condition. They work exclusively with original spare parts that meet the right specifications and therefore extend the service life of your machine. If you experience a malfunction, we will quickly get you back on track. Original spare parts are always available from stock within 24 hours.

Our dealers will be happy to advise you on what machine is suitable for your activities. Regardless whether you need a flail mower, wood chipper, blower, debris loaders or vacuum trailer.

THE BEST RESULT, ANYWHERE, ANYTIME

Votex offers flail mowers for verges, ditch sides and embankments that operate at their maximum even under extreme mowing conditions. That starts with a well thought-out design, the result of years of experience and specific product knowledge. For example, Votex gearboxes have been developed to provide a high power output, while minimising noise. Thanks to the application of innovative technology and the use of high-quality materials, you can count on a long service life.

Most flail mowers are equipped with an ECOMOW® cutting head. This large cutting head has an enlarged inlet and outlet. This enables the grass and weeds to move more smoothly through the machine, increasing the mowing speed and reducing the power demand. This also leaves the clippings longer, which facilitates cleaning-up.

Votex side flail mowers are equipped with a specially developed spring assembly, which ensure the flail mower to safely break out when hitting an obstacle. This prevents damage to the object and the machine.

Cutting heads have been designed to be torsionally stiff, ensuring quiet, vibration-free operation. Whichever design or type you choose, they will do the job.

Votex offers a wide range of flail mowers that are suitable for all tractor brands. You can choose from the front, side or rear of the tractor. The flail mowers have a varying width, from 120 cm up to 310 cm.

LEADING IN TURF AND GROUNDCARE

For public gardens, sports fields, golf courses and recreation parks Votex offers blowers, suction units and vacuum trailers in its product range. Thanks to their small size, their low net weight and low power requirements, these machines can be used even in the most vulnerable areas. Despite their compact design, the machines deliver maximum performance.

You will clearly recognise the Votex features on these machines, too: robust construction, wear resistant materials and smart features that make for optimal user comfort. They guarantee many years of enjoyable and trouble-free use.

When it comes to blowers, Votex offers a comprehensive range. You can choose anything from push blowers to PTO blowers; from hydraulic to motor blowers. The smaller blowers are suitable for compact tractors and ideally suited for work in and around sports fields. The larger blowers have been specifically developed for the professional user to collect leaves and litter simultaneously. Another reason to choose Votex is that the noise level of its machines is considerably lower than that of other brands. This benefits both the customer and the environment.

Votex offers an equally wide range when it comes to suction units and vacuum trailers. For example, we offer a suction unit that can be easily mounted on a trailer or a pick-up; a suction unit that can be attached to your tractor, and a range of vacuum trailers with a loading capacity ranging from 4.5 to 11 cubic metres.

MINIMUM MAINTENANCE, MAXIMUM EFFORT

Votex has constructed high-quality agricultural machinery for decades. Votex has always put a premium on maximum quality when designing its machines – and this translates into a long, trouble-free service life and low maintenance costs.

With a broad base of satisfied customers, Votex mowers are among the best in their field. A Votex mower is a mower that you can trust. Need to mow green manures or ditch slope sides? Votex has the perfect mower for you. And, of course, you can choose from a range of sizes.

Votex has developed a series of machines especially for market gardeners and fruit growers that pulverise wood trimmings with a diameter of up to 10 cm. The shredders are suitable for front and trailed mounting, or even for both. These compact machines are available with a operating width from 80 to 250 cm.
